Got Fire & Life Safety lines?
It's time to STACK-UP!

Still using copper lines for your Fire & Life Safety lines? What happens when you lose power? What happens if you need to add line service? You're stuck. The phone company is discontinuing their use of traditional copper lines. If you DO lose power, your alarm and safety lines are down – HARD. Don't let this happen. It's time to STACK-UP using NHC's Fire & Life Safety line service!

Meet the solution:

Our Fire & Life-Safety (FLS) solution, powered by EPIK™, delivers your analog safety service over 4G LTE technology and is backed-up by wired internet access...

- **Battery back-up** – If your office power goes down, our device's lithium-ion batteries will keep you running for hours.

- **Redundancy** – Our FLS runs on Verizon's highly reliable 4G LTE network. You'll have backup over your wired Internet in case your primary service goes down.

- **Reliability** – Our FLS lines are cloud-sourced. If something does go wrong, resolution is fast and most of the time it can be fixed remotely, keeping your business running.

- **Save Money** – Copper costs have tripled and even quadrupled in some places with future increases likely. With NHC's FLS, you can save 40 to 60%.

- **Bundle with newVoice™** – If you have voice line needs, bundle FLS with your NHC newVoice™ to save more AND have more with our cloud-first voice network!

Life-Safety
Allow gates, alarms, and elevator phones to function if power or internet goes down.

Disaster Recovery
Reliable, self-contained connections for a cost-effective failover alternative to copper lines.

Internet Back-up
Enjoy 4G Internet failover for primary internet connection.

Compliant
NFPA Rule 72 & UL Rule 864 for fire alarms and panels.
