Simplify Your Network with **NHC's**
SD-WAN

Does your organization operate a "set in stone" traditional network that divides voice, private data and Internet applications into separate and costly access circuits? Do you struggle with bandwidth constraints, service quality or demand for cloud-based applications?
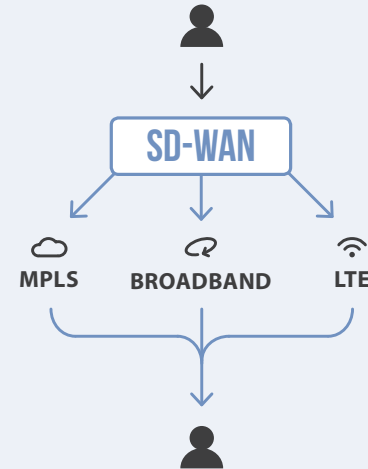

SD-WAN CAN HELP.

SD-WAN (Software-Defined Wide Area Network) applies software-based technologies to WAN connections to route network traffic across all of an organization's locations and the cloud. It leverages the benefits of the cloud, the bandwidth of broadband, and existing enterprise-wide network infrastructure to more efficiently and cost effectively transmit media (data, video, voice). With SD-WAN you can **save money, eliminate bandwidth constraints, and provide better access** to cloud applications from every location in the network.
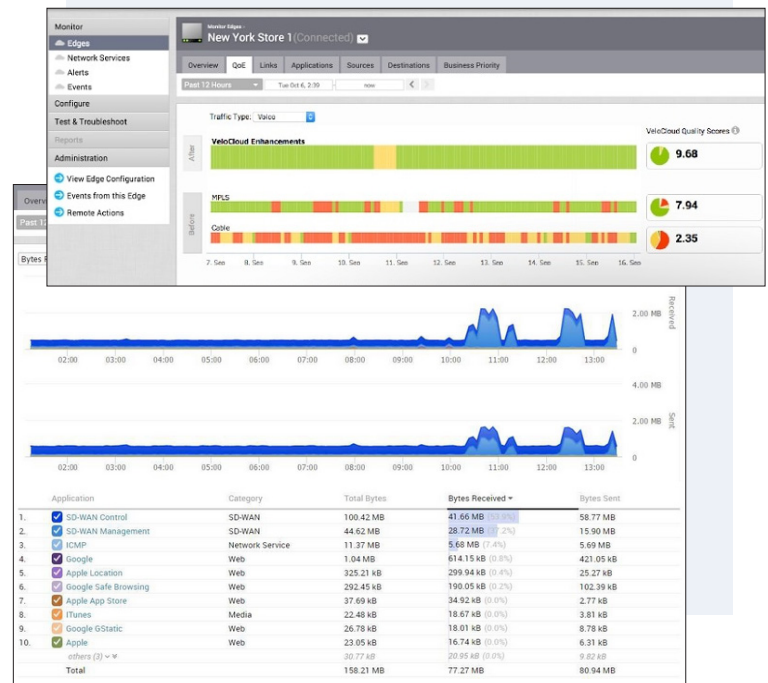

SD-WAN:

➜ dynamically shapes bandwidth to eliminate jitter and dropped data packets.

➜ steers traffic to the best available link.

➜ immediately applies on-demand remediation when needed to ensure performance of high priority applications.

OPTIMAL USER EXPERIENCE

SD-WAN uses multiple connections (MPLS, broadband, LTE) to find the best delivery path.

SD-WAN

BENEFITS OF SD-WAN

Network Agility
Easily add cloud-based services, new branches, or remote offices.

Better Application Performance
Get more bandwidth per location through intelligent traffic routing.

Ease of Deployment
Leverage cloud, software, and hardware deployment options to make changes without manual configuration of separate devices.

Central Management and Control
Administer and monitor the entire network through a single interface with access to real-time analytics.

Support for Cloud and Real-time Apps
Balance bandwidth and security requirements for the dynamic and complex management of cloud apps.

Cost Savings

➜ Leverage existing infrastructure.

➜ Reduce time and resources associated with remediation costs.

➜ Accommodate OpEx budgets through subscription models and payment plans.

➜ Manage all deployment functions through a central IT office.

➜ Cut down application-specific hardware or software installations.

WHY CHOOSE NHC FOR SD-WAN?

Get the most from your SD-WAN services with the scalability, affordability, and flexibility that comes from an experienced full-service communications utility and managed service provider.

NHC's SD-WAN services are:

Carrier Agnostic
Bundle our SD-WAN and Internet access service, or use your existing Internet access and add our SD-WAN functionality.

Robust Framework
Our SD-WAN service has eight gateways deployed within the network.

One-Stop Shopping
A powerful nationwide network, advanced products and services, consolidated billing, a single point of contact, and exceptional customer service.

Move to NHC's SD-WAN services and let us help you reduce costs and improve the way you communicate with your customers, suppliers, and employees. Get in touch today:
